## VITAL STATISTICS

**Year Founded:** 1994

**Number of Employees:** 300+

**Contact:** Tom Salus, Director of Sales; John Ross, Executive Vice President

## WHO WE ARE

Metrics Contract Services is a leading full-service pharmaceutical development and manufacturing organization serving clients worldwide. We deliver proven scientific and operational excellence for oral dosage forms. Today, as part of the Mayne Pharma family, we offer clients more resources and capabilities than ever before.

Started as an analytical laboratory in 1994, Metrics has evolved into a full-service provider of:

- Quality pharmaceutical formulation development
- First-time-in-man (FTIM) formulations
- Clinical material manufacturing (CTM) for Phase I, II and III trials
- Commercial manufacturing and
- Analytical method development and validation services
- Specialty technologies for controlled release and bioavailability enhancement

## SERVICES OFFERED

**Formulation development.** We offer expertise in poorly soluble and unstable actives, highly potent API, immediate and modified release, and small molecule delivery.

**Potent and cytotoxic products.** Our cGMP compliant, dedicated and segregated facility features custom-engineered containment. With no open processes or PAPRs, and one-way material flow, containment is achieved at <=30 nanograms/$m^3$.

**Fast-track development.** Metrics has successfully delivered materials for over 130 FTIM studies. Our process ensures speed and quality, with a 16-24 week timeline from receipt of well-characterized NCE to shipment to the clinic.

**Analytical methods development and validation.** With 90+ analytical chemists on staff, our services include chromatography (LC and GC), dissolution (UV and LC finish), moisture, particle size, ion chromatography, AA/ICP, FTIR, titrations, particulate matter (HIAC), cleaning methods (LC and TOC), and LCMS.

**Clinical trial manufacturing Phase I, II, III.** Our CTM capabilities offer capacity for up to 450Kg batch sizes. We also offer expertise in over-encapsulation for comparator studies and potent drug handling capabilities.

**Commercial Manufacturing.** Large scale Phase III clinical trial or commercial manufacturing of solid oral dose formulations, including DEA II-V controlled products.
