Company Description

Manufacturer of patented forms of mineral amino acid chelates and other organic mineral forms. Albion was founded in 1956, and the company has devoted its years to researching and manufacturing the finest in mineral supplementation. Albion is the World Leader in mineral amino acid chelate production and technology. Holder of many patents (now over 100), Albion is heavily involved in the funding of internal and external research as well as clinical research. Albion has recently developed and patented a single test method for the validation of chelates - allowing for not only the identification of the chelate, but also for quantifying the degree of chelation in a mineral amino acid chelate. This has led to the development of the TRAACS® program, and the new chelate tradename TRAACS®. This program is exclusive from Albion. No other company can provide this overall chelate product and program.

Key Personnel

Max Motyka
Director Human Nutrition Division

DeWayne Ashmead
President

Jim Hyde
CEO

Rick Harnish
Eastern Sales USA

Theresa Seaquist
Western Sales USA

Major Markets

- USA
- Mexico
- Europe
- South Africa
- Taiwan
- Australia and New Zealand
- India
- South America
- Canada
- Middle East
- China
- Thailand
- Central America

Major Products

Ferrochel® (ferrous bisglycinate), TRAACS® (The Real Amino Acid Chelate System), Calcium, Magnesium, Iron, Copper, Manganese, Zinc, Vanadium, Chromium, DimaCal® (diCalcium Malate), DiMagnesium Malate, CCM (Calcium Citrate Malate), Calci-K® Complex (calcium potassium phosphate citrate), Creatine MagnaPower® (magnesium creatine chelate).

Specialized Services

- Customized Mineral Blends
- Contract Mineral Chelate Manufacturing
- Contract Spray Drying
