Company Description

Since 1979, Biotron Laboratories, Inc. has specialized in manufacturing mineral amino acid chelates and complexes. Our goal is to provide our corporate customers top-tier service and continual product improvement resulting in premium materials. To accomplish these goals, we rely on a depth of experience, a rigorous approach to product quality and emphasize both scientific validation and integrity.

Biotron's clinically validated products are designed with cutting edge science and the body's physiology in mind. While this field is always changing and new discoveries are constantly reported, Biotron makes it a point to improve our proprietary "Biotron® Process" to keep pace with change.

Branded Ingredients:

Cytocal™ is a unique form of multi-amino acid chelate, delivering 15% elemental calcium in a proprietary matrix primarily consisting of enzymatically hydrolyzed soy protein isolate. The data collected from a clinical study shows that Cytocal™ has a meaningful impact on the body's response to oral dose calcium when compared to calcium carbonate USP. The effects happen faster, producing greater effects which persist longer than they do when taking calcium tablets prepared with inorganic salts. This data informs product development specialists when considering a new stand-alone calcium product, when extending a product range, or to offer a new and improved version of an existing product.

Ferractiv® is a unique iron multi-amino acid chelate which has been clinically proven to be well tolerated, highly bioavailable and has been studied at the atomic level to enable a definitive distinction to be made between this full-reacted mineral chelate and other un-reacted blends or irritating, low-value inorganic salts.

Biotron's commitment to science is mirrored in a commitment to strong quality controls. As the first mineral chelate manufacturer to achieve ISO9001:2008 registration, our comprehensive Quality Management System ensures traceability and consistency. Biotron's full product range is certified Kosher and select products are certified Halal.

Key Personnel

Gameil T. Fouad, Ph.D.

President

Robert Bemenderfer,

Plant Operations Director

Rheda Fouad

CFO

Major Products:

Ferractive®, Cytocal™, Calcium Amino Acid Chelate, Zinc Amino Acid Chelate, Iron Amino Acid Chelate, Magnesium Amino Acid Chelate
