

Company and position

The BRÜCKNER group is a world-wide acting owner-run mechanical engineering company with more than 65 years of tradition and experience. Today, around 330 employees are working for BRÜCKNER and are oriented exclusively towards the demand of the market and the customers. Since the beginning of the nonwovens industry BRÜCKNER is one of the pioneers in this field and has heavily influenced and advanced a great number of processes and technologies with its innovative machinery solutions. Thanks to these efforts BRÜCKNER has a leading position in the market in many areas of nonwovens bonding and nonwovens finishing, a sector which gets more and more important. Also the request for energy-saving and ecological machinery systems, which is today often discussed, has been subject of intensive research and development works by BRÜCKNER from the very beginning. Investments in advanced production technology, the use of the latest materials and control systems, basic and advanced training of highly qualified staff members and a narrow cooperation with industrial associations, research institutes and universities will guarantee the position of BRÜCKNER as first-class partner also in future.

Product range

Our product range comprises a variety of application units for liquid, foamed, pasty and solid chemicals as well as dryers and ovens with process-optimized material guidance and flexible ventilation systems. We supply of course also the corresponding technology for drying, coating, laminating and many more. With our own production in Bavaria, Germany we are in the position to ensure our customers highest quality products and short delivery times.

Brückner thermofusion oven

Application units

- Foam impregnation units
- Powder scattering units
- Coating heads
- Flocking devices
- Kiss roll systems

Dryers and ovens

- Flat passage ovens
- Drum dryers
- Batch ovens
- Heat-setting lines
- Airlaid ovens
- High-temperature ovens

Other equipment

- Smoothing calenders
- Laminating and embossing calenders
- Batcher and winding systems
- Exhaust air cleaning and heat recovery systems

Technology center

In June 2013 we inaugurated our new technology center in Leonberg. It offers the most different coating, heat-setting and finishing possibilities for tests on a production scale. For interested people it is at any time possible to rent the hall and the machine. The new line shall support you to develop new products, to make tests, evaluate them in our own laboratory and to define the exact machine configuration for a later production. See you soon in Leonberg!

Regina Brückner and her husband Axel Pieper
