

2014 Company Capabilities

The Company

CB PACKAGING A.P.I. S.R.L., under the trade mark CB PACKAGING designs and produces technologically-advanced, reliable packaging machines and equipment for soft hygiene disposable products -sanitary napkins, baby diapers, incontinence products, wet & dry wipes and tissues, as well as fully automatic packaging machines, stackers and integrated baggers, stacking and compacting modules, turnkey packaging devices.

CB PACKAGING A.P.I. S.R.L. was born in 1992 and moved to the current premises in Bagnolo Cremasco in 1997. The company has been experiencing stunning growth moments thanks to its managerial team's choices. Indeed, being the industrial development the real Company's driving force, the managerial team has taken care of investments in technology and updating ever since the beginning of the activity.

In 1998, CB PACKAGING A.P.I. S.R.L., was merged with "BETTINELLI Flli S.p.a." Company establishing itself as an integral part of a group which consists of 180 employees and covers an area of over 20.000 square meters destined to design, development, production, control and shipment.

In 2013 INMAN S.R.L. Group took over "BETTINELLI Flli spa" and "Cofil SRL", thus becoming a corporate partner of great importance for CB PACKAGING API S.R.L.

Plus

CB Packaging A.P.I. S.R.L. is always careful and extremely flexible in order to work out the most suitable

solutions fully matching their customers' needs.

CB Packaging A.P.I. S.R.L. constantly provides the customer with technical support thanks to a 24/7 service.

All our Machines are designed and tested following international operation and maintenance targets (MTBF, MTTR). The format changeover is very quick and easy, and the format can be saved in the control PC so that they can be recalled during the changeover procedure.

The product **SETUP function**, which is activated through the Monitor Touch Screen, is able to determine all the parameters of a new format simply starting from the final dimensions of the packages and the initial sizes of the empty bag.

The production line is not affected by any slowdown, thanks to the Stacker and bagger speed self-adaptation. All machine groups are servo driven thanks to the servomotor management by Electronic Cam (compacting unit, pusher group, welding station, ...), so that no operator's intervention is required and all operations are handled through a touch screen monitor.

The intuitive user interface offers a multi-lingual touch screen and allows a multi user access according to the user type.

All software programs, HMI (Human Machine Interface) and Computer Main Brain are designed and developed by our engineers.

CB Packaging A.P.I. S.R.L. can grant 20 to 50% reduction in machinery and spare parts prices, thanks to the fact that 80% of machine components are made by the group itself.
