Colordyne Technologies (CDT) is a leading manufacturer of high speed digital color print solutions powered by Memjet technologies. CDT specializes in affordable, high speed, high resolution Industrial and Production Class label and tag color on-demand inkjet printers (sheets, roll-to-roll, and fan-fold) for a wide range of applications and industries at breakthrough speeds and cost effectiveness.

CDT digital technology successfully replicates the true look and feel of CMYK flexo printing. CDT offers three digital printing press solutions touting the fastest speed, highest resolution, and lowest costs on the market with in-line finishing options such as UV varnishing, laminating, and rotary & laser die-cutting. For the ultimate digital, turnkey solution, we offer the CDT 1600-PC Laser Pro requiring no dies or cylinders (the laser will die cut and perf, score, and completely knock out shapes without the need for mechanical dies). Our laser allows operators to process more challenging substrates or adhesives without hesitation or the need for retooling. It's easy to move from one print job to the next, regardless of image, color, shape or size, minimizing setup time and waste.

Additional digital press options are the fully in-line finishing CDT 1600-PC Rotary Pro solution that can utilize your existing die inventory, or for entry level roll-to-roll printing press, we offer the 1600-PC Sprint. Along with the full line of digital label presses, there is the option for the 1600-PC Retrofit that allows you to turn your existing press into a state-of-the-art hybrid digital web press.

The CDT 1600-PC line of digital presses utilizes Memjet's revolutionary waterfall technology with a drop size of 1.2 picoliters (smallest in the industry). Our small drop sizes and water-based inks allow us to achieve the highest resolution and fastest speed (1600 x 1200 dpi at 160 ft/min).

The superior performance and price proposition, ease-of-use, self-maintainability, and scalability of the CDT 1600-PC line of digital presses create a powerful productivity tool suitable for use in a variety of business environments. The CDT 1600-PC's just-in-time printing solutions provide users with the flexibility to queue and run multiple jobs in the same run and change copy (i.e. part numbers, logos, sequential numbers) at any time prior to production.

The 1600-C (Continuous Roll-to-Roll) and 1600-S (Sheet Fed) Industrial Class printers provide fully variable, digital print solutions for customers with requirements demanding enough for high speed production, but lacking production volumes that would justify a 1600-PC model. The Industrial Class printers from CDT are complete, bundled solutions that not only include robust hardware built to run day-in, day-out, but the software required to implement efficient and productive digital workflows. Colorize expiration dates, manufacturing lot numbers, warning symbols and other mission critical information all on one label using the 1600-C Roll and Fanfold Color Printer. Use the 1600-S Sheet Fed Digital Color Printer to print your own forms, invoices, packing slips and inserts.

With a full range of hardware and software products, from a bench top, sheet fed printer that can produce shipping invoices, to a high volume printer with fully integrated finishing auxiliaries, CDT spans the full spectrum of production needs. CDT maintains two offices in Scottsdale, AZ and Brookfield, WI.
