50 YEARS OF EXPERIENCE IN THE INDUSTRY

Our passion for innovation and the inspiration that we receive from our customers has allowed us to expand, since the foundation in 1963, into a Group of five companies and manufacturing plants in Italy with over 280 employees. OMET world presence is guaranteed by three subsidiaries in the world following areas of strong growth like the Far East, (OMET SUZHOU in China), Latin America (OMET IBERICA based in Spain) and Central and North America (OMET AMERICAS in the US), and a large number of qualified international agents.

OMET's 'Innovation with Passion' and 'Dedication to Design' flow freely throughout the company, and are fundamental to our proud heritage as a technology manufacturer. We continuously strive for excellence through our Research & Development, and our history tells the story of pioneering ideas and a visionary approach that are translated into a high level of experimentation, flexibility of processes and materials, and often ground-breaking solutions.

OMET AMERICAS

We have always prided ourselves on the care and attention we give our customers and being close to them is our first thought. To better follow all the North American and Central American customers we felt the necessity to establish a dedicated team of certified engineers and service specialists on site to handle service calls, repairs, refurbishments and parts delivery. The continuous flow of information between Italy and the United States, and the training program our worldwide personnel is requested to attend within short intervals, allow offering high levels of assistance and consultancy on technical and commercial matters. To improve service even more, the offices have recently (2013) moved from the original site in Michigan to a much more strategic location in Des Plaines, Illinois.

NARROW AND MID-WEB PRINTING PRESSES

OMET's printing presses combine ease of use, low wastage levels, reliable non-stop operation, and efficiency on short runs. Robustly built, and inherently safe to operate, OMET's machines require little maintenance and deliver outstanding performance with a minimum of

human intervention. The company's main objective is to offer customers multi-technology printing platforms that support their growth, boost their efficiency, and can be adapted to suit any changing need.

Varyflex V2 and XFlex X6 are characterised by high efficiency of operation and overall flexibility and can accommodate a great variety of jobs with different levels of complexity. They are modular presses on which a mix of printing, finishing and converting technologies secures all-in-one-pass production with short set-ups and reduced waste and fulfils the needs of today's most demanding customers in the label and flexible packaging markets. The XFlex range is completed by XFlex X4, a mix of quality and affordability for the printer that relies on traditional print cylinders but appreciates the contribution of servo motors and of advanced controls like OMET Vision-1, and XFlex X2, mechanical press for the printing of labels and unsupported films characterised by inner robustness and operational efficiency.
