TURN ANY PRESS INTO A CONVERTING PRESS

For twenty-plus years Telstar Engineering has pioneered the development and manufacture of label press performance upgrade equipment. Add the multi-faceted DecoMod™, cast & cure holographics, cold foil, digital finishing ink jet, flexo, hot stamp, hot melt pattern printers, nips and servo laminating, rotary die, rotary screen, rewind/unwinds, conveyors, plus plow-fold and turn-bars. Telstar's early entry into servo technology brought electronic control to label presses and the company now installs servo on presses once run only as mechanical machines.

Utilizing its exclusive CadToGo™ Onsite Engineering, Telstar can custom fit almost any retrofit unit at any station on any existing or new press brand. Some, such as unwind/rewinds, can perform as portable stand-alone units. The Offliner™ Web Transport System with its built-in unwind, rewind, steering and closed-loop tension control puts converting capability on the print shop floor so you can offer products like digital ink jet, rotary die, and rotary screen. Imagine the competitive profit possibilities you can achieve!

OUR BUSINESS IS HOT AND COLD

No other company offers hot stamp this advanced. Telstar's system features a digital touch screen unit with recipes for steel, brass, and magnetic dies. Extensive diagnostics inform the operator of all system parameters. The electrical connector and quick-disconnect pneumatic fittings enhance change-over. Various anvil coverings improve performance on hot stamping, heat sealing, and embossing.

Telstar Cold Foil can fit anywhere on this Mark Any 4150-20 press.

Portable and powerful Telstar Hot Stamp – label printers' first choice.

Digital UV ink jet integrated on a 16" label press by Telstar.

Electrically heated units are available from 7" to 20" widths.

Telstar pioneered the early development of cold foil application equipment. Ongoing R&D and in-depth experience adding Telstar retrofits on a variety of press brands has demonstrated the value of Telstar's cold foil units. Inline, on rails, offline, and designed for re-sequencing, Telstar cold foil equipment is simply the best in the industry. Enjoy the benefits of cold foil no matter how complex your application.

DIGITAL IS INEVITABLE

Digital or Hybrid printing is not a fascination, it's a fact. More and more customers are seeking the flexibility of digital printing and variable information application for on your press or on our Offliner™ Web Transport Platform ... it's a great way to offer converting products to your best customers and new ones!

CONVERTING TO BIG-TIME CONVERTING

From ground-up designs to reconfigured label presses, Telstar has custom manufactured full-frame converting presses for everything from thin film conductive ink and scratch-off applications to gravure printed candy wraps and ballot presses. One of our multi-app UV presses is capable of hot and cold foil, rotary screen, flexo and embossing along with die cutting and a finishing line all on one decorating press. Take advantage of Telstar's CadToGo™ Onsite Engineering to mix and match retrofit units on your press to achieve the most demanding customer specifications. Telstar Engineering ... your Press Performance Specialists.
