

2014 Company Capabilities

Texbond
nonwovens

Texbond is a major producer of spunlaid nonwovens suitable for practically all applications, from hygienic cover stocks to roofing underlays, from crop cover webs to filtration and car covers carriers, from medical to personal care components. In all these fields and for over 20 years of activity, we have earned the reputation of a highly reliable partner, strongly committed to the customer's needs, through state of the art technology, consistent improvement of production techniques and focusing on R&D.

Our HYBOND product range includes an extensive portfolio of light soft and competitive cover stocks. Manufacturers of absorbent hygienic products find in it cost-effective core wraps, leg cuffs, top and back sheets or front ears.

As a solution to more sophisticated requirements we offer ultra-soft and bulky grades, capable of delivering the highest comfort at the most competitive prices. BLOWBOND, a range of webs capable of combining fine denier and low bond technologies, is the perfect key when softness and bulkiness have to be delivered to the highest machine efficiency required by the diaper manufacturers.

To fulfill the requests of an always more demanding market, we offer also improved cover stock materials like 10gsm silky touch version of back and top sheets or 15gsm ultra-soft, silky touch top sheet, flavored by botanical essences and or ennobled with prints on demand. Printed top sheet can be

supplied in a minimum width of 70 mm and basis weights varying between 12 and 27 gsm. The printing patterns of 2 colors have both register and repeated length possibility. Area placement and positioning are comprised within a very narrow tolerance range.

In addition to superior fiber distribution webs, we offer a wide range of composites (nonwovens + functional membranes) like roofing breather under-layers, flexible waterproof joints, acoustic insulation carriers and other customized products.

We offer a wide range of UV and UV FR PP webs specifically designed as roofing underlays carriers. The ULTRATEX family is available in a number of colors and treatment up to 3300 mm width. Thanks to the right balance between filament distribution and mechanical performances our nonwovens are the right solution to practically all bonding systems used in the roofing industry.

Our roofing breather underlays, LAMINATES, are available up to a width of 3100 mm, in a weight range included between 90 and 330 gsm. Highly reflective, long lasting, 3 m wide versions are also available.

We develop and supply high performance materials to many other industries and our organization is perfectly suited to customize solutions for our industrial partners. Thanks to the variety of the applications to which we are daily exposed, we address issues with a great mind openness and provide value for customers, cross-breeding common R&D projects with experiences matured in different fields. All our activities are informed by sustainable business practices and by responsible management. Our mission is to combine social purpose with commercial success.
