Number of Facilities: 1

WHO WE ARE

Gauthier Biomedical, Inc. is a proud manufacturer of high-quality instruments for spine, trauma, hip, shoulder, knee, ankle and small bone surgical applications. When it comes to handheld orthopedic and spinal instrumentation, we manufacture the finest products on the planet. We are proud to be known as the industry innovator and look forward to the opportunity to help maximize your corporate brand by putting world class instruments in your doctor's hands.

MAJOR MARKETS

Original equipment manufactures (OEM) of medical instrumentation.

SERVICES OFFERED

Our vertically integrated business model allows us to focus on leadtime and cost reduction while delivering industry superior product quality. From initial concept through final shipment our goal is to deliver the highest value products when you need them. We take great pride in the many innovations we've brought to market over the past 12 years and look forward to continuing our journey to world-class excellence with you.

Invigorated Growth

Our new 80,000 sq. ft. corporate headquarters and manufacturing facility was completed in 2012. This expansion allows Gauthier to give you more of the products you want when you want them.

Excellence in Molding

At Gauthier, we design and build our own molds. Our flexible production strategy coupled with our unique understanding of all aspects of the molding process allow us to meet your most complex molding needs and deliver exactly what you want when you want it. Our most popular branding technology allows us to embed custom textures, have raised or recessed logos/text, and provide handles with multiple colors and durometers. These options are rigorously tested to withstand 500 autoclaves without degradation, and will provide years of brand recognition in the market. This is your opportunity to set your company apart from the competition. U.S. Patents Pending.

Precision Machining

Designs become reality through the use of our full-featured CAM software in combination with some of the most sophisticated pieces of CNC equipment in the world. With our multiple 11 axis Swiss machines, 5 Axis turning/milling expertise and the capability of everything in between, we work machining magic in all grades of stainless steel, aluminum alloy, titanium, plastics, and phenolic. As a vertically integrated manufacturer of precision surgical instruments we also deploy a full complement of supporting manufacturing capabilities including EDM, TIG welding, laser welding, brazing, heat-treating, laser marking and assembly.

Engineering

Whether it's improving an existing tool or developing a unique custom instrument, our engineering team will deliver. Our design experience is rooted in biomedical engineering and orthopedics, so you can be sure you're in the most competent hands in the industry. We encourage you to bring your projects to us, no matter what stage in development. Our decades of experience in the industry means that most likely, we've been there before. We're regularly developing new ergonomic handle designs and breakthrough features to offer competitive advantages. Whether you are looking to add your logo, implement a multi-color handle, or go completely outside of the box, our engineering team is here to get you the most innovative designs possible.
