Corrugated Displays and Packaging

Company Description:

In operation since 1961, McLean manufactures packaging for the rigid set box, folding carton and corrugated packaging markets. McLean's goal is to provide its customers with packaging that exceeds their expectations and creates shelf appeal and greater product sell through.

McLean invests in unique capabilities such as specially configured printing presses, in-line cold foil applications, exclusive 360-windowing technology, in house thermoforming, set box lamination, tri-feeder gluing and Asitrade litho-lamination for corrugated components, etc. These special capabilities allow McLean to structurally engineer and graphically design packaging that separates itself from the competition.

McLean's ability to manage all of the manufacturing processes in house enables them to supply customers with the highest quality packaging solutions without relying on outside services. This is especially true in rigid set box manufacturing where McLean is the only company in the US to offer its customers full turnkey solutions for its packaging components, with all processes being handled by one team, all in-house. A true advantage for the customer!

Major Markets:

Health & Beauty
Confectionary
Consumer Goods
