GLOBAL REACH, LOCAL FOCUS

RotoMetrics is recognized as the pioneer name in the rotary tooling industry. With unmatched local manufacturing, global reach, product development expertise and customer service, you can count on RotoMetrics to support the breadth and depth of your projects.

No matter what the application — from pressure-sensitive labels and flexible packaging to converting advanced film substrates or nonwoven materials — at RotoMetrics, you'll find the highest-quality rotary dies and flexible dies, print cylinders and sleeves, anvils and rotary tooling, all competitively priced.

The company has headquarters near St. Louis, Missouri, major manufacturing operations on four continents and the industry's most knowledgeable Customer Solutions and expert Technical Support teams.

INVESTING IN THE BEST

RotoMetrics has the industry's most comprehensive product offering, delivering accuracy and dependability across printing and finishing processes. Continuous investments in manufacturing process technology and equipment enable us to offer industry-best lead times and product quality. RotoMetrics is ISO:9001:2008 certified in quality standards and remains the only rotary tooling supplier to achieve the ISO 14001:2004 environmental standard.

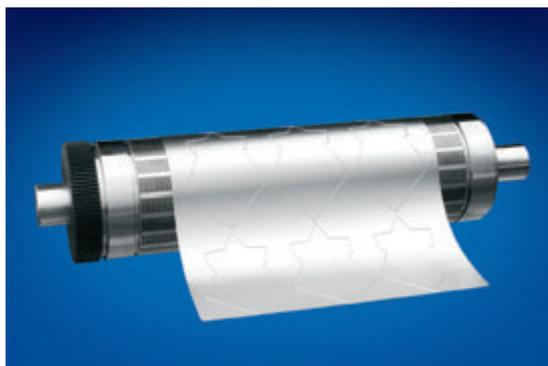

ROТОMETRICS

RotoMetrics' solid engraved dies have, for decades, set the standard for precision,

durability and performance. Our range of solid dies addresses narrow web tag & label all the way through mid web specialty converting, hygiene and medical applications, and long running abrasive jobs. As an industry groundbreaker, RotoMetrics continues to develop and expand machine finishing capabilities, while our team of hand finishing experts ensures our continued support of your current cutting die inventories.

FLEXIBLE DIES

RotoMetrics' new flexible die product line-up, Accu-Series™ offers a full range of features within a newly refined portfolio. This series is designed to empower converters by enabling them to choose the product features that are most important to their individual project.

For today's typical short to mid run projects, the AccuSmart™ is the economic choice. For more cutting options, the AccuPrime™ provides capabilities to convert a wider range of substrates and liners. For the most challenging applications, AccuStar® UltraFilm™ delivers the most exacting cutting precision to the most challenging synthetics in today's market, while AccuStar® Life™ targets the most abrasive materials converters face today.

PRINTING TECHNOLOGY, ANVILS & ROLLS

Our products offer ease-of-use and efficient, accurate, maintenance-free performance on press. The AccuStrike™ anvil allows press operators to adjust blade clearance on press with extreme precision. Controls enable the operator to adjust bearers either independently or simultaneously to provide unmatched control over liner strike on new thin film materials.

YOUR PARTNER

Our entire team understands that YOUR success depends on the products and support we deliver. That's why we are working harder than ever to serve as your preferred source for all rotary tooling needs.
