Spartanics systems come standard with Fastline Optimization software that imports a laser die cut file from any Adobe Illustrator artwork file within seconds. With laser systems fully integrated in both the Durst TAU 330 LFS and INX International NW210 UV Inkjet Digital Press, Spartanics has become a leading supplier of laser systems in the UV inkjet digital market.

## PARTNERSHIP

In 2015, Spartanics paired the X-350 Laser Cutting Module with SMAG Graphique's (www.smag-graphique.com) automated line of converting equipment to provide the most flexible converting solution on the market today. SMAG's E-Cut semi-rotary die cutting system offers an entry level solution to customers looking for quick job turnaround. The Digital Galaxie converting solution by SMAG allows customers to build a press that suits their converting needs for the production of wine labels, cosmetic labels, prime labels and more. Both the E-Cut and Digital Galaxie systems are sold and serviced in North America by Spartanics.

Spartanics continues to break down barriers in the converting industry with unsurpassed in-line and offline laser cutting solutions that service the label and packaging markets. Developments in laser cutting technology continue to push the limits of converting PET, PP, PE, paper products and clear materials. Laser cutting technology removes aggravating tooling costs and produces more up time on your converting press than conventional systems. System configurations range from 200 watt to 400 watt to 1000 watt laser cutting solutions with average speeds ranging from 30 to 80 meters per minute.

## LASER CUTTING SOLUTIONS

### As Flexible As You Want It To Be...

- ✓ Laser Die Cutting
- ✓ Flatbed Screen Printing
- ✓ Semi-Rotary Foil
- ✓ Flatbed Die Cutting

- ✓ Semi-Rotary Die Cutting
- ✓ Full Rotary / Semi-Rotary UV Flexo
- ✓ Flatbed Foil
- ✓ Flatbed Embossing
